#### 问题描述

对端锐捷配置

```
crypto isakmp mode-detect
crypto isakmp policy 10
encryption sm4
authentication pre-share
hash md5
!
crypto isakmp key 7 ***** address 0.0.0.0 0.0.0.0
crypto ipsec transform-set AA_IPSEC_TS esp-sm4 esp-sha-hmac
crypto dynamic-map AA_DM 20
set transform-set AA_IPSEC_TS
reverse-route tag 30
!
```

crypto map AA\_CP 20 ipsec-isakmp dynamic AA\_DM

客户提供能正常建立的迈普设备配置：

```
crypto ike key *** address 192.168.0.22 (CMCC) / M.N.0.14 (CTCC)
crypto ike proposal GM
encryption sm4
integrity md5
exit
crypto ipsec proposal GM
esp sm4-old sha1
exit
```

现场参考迈普设备输出了以下我司配置：

```
#
ipsec policy SIM1(Cellular1/1) 65535 isakmp
transform-set GM
security acl name GM
local-address A.B.40.4
remote-address M.N.0.14
description GM
ike-profile GM
#
ike profile GM
keychain GM
match remote identity address M.N.0.14 255.255.255.255
proposal 65535
#
ike proposal 65535
#
ike keychain GM
pre-shared-key address
M.N.0.14 255.255.255.255 key cipher $c$3$Xv9W4/Ro37qzSffiHs8LBt5BvIAgkxJCTgqYd7CXQ==
#
```

但ipsec始终无法建立，debug ike all 显示错误信息如上

#### 过程分析

依次核对IKE和IPSEC的各配置模块。

- 1、ike keychain已配置且指定锐捷设备IP；
- 2、ike profile 已指定对端锐捷设备特征为IP地址；
- 3、ike proposal 在锐捷设备中未找到明确对应，但迈普设备在proposal中指定了加密算法SM4，而我司缺省的加密算法不是SM4；

#### 解决方法

ike propose 65535下配置加密算法为SM4
